Dividends	Yes
Web site	www.danskeinvest.com
Launch	05-07-1989
Total assets, mill. (DKK)	369.86
Base currency	DKK
Domicile	LUX
Initial charges up to	0.00 %
Fund company	Danske Invest
Management fee	0.80 %

### About the fund

Danske Invest Danish Bond Class D invests in bonds denominated in Danish kroner and listed on an official stock exchange or another recognised marketplace for bonds.

The portfolio's overall duration, including any cash holdings in Danish kroner, adjusted for estimated prepayments (option-adjusted duration), must fall in the range of 2-5 years.

Bonds issued by a particular issuer may not exceed 10% of the total portfolio, and the total percentage of bonds issued by issuers that each account for more than 5% of the portfolio may not exceed 40% of the total portfolio, with the following qualifications:

Certain exemptions apply for government bonds, bonds guaranteed by EU member states and bonds issued by particular credit institutions.

### Historical perf. as of 31-07-2010

The chart shows the value of an investment of 100 DKK over the past 8 years or, if the fund is less than 8 years old, since its inception.

### Key figures - 3 years

Sharpe ratio	0.71
Volatility	3.95
Average annual return (%)	5.93

### Return volat.

The fund's return will fluctuate as markets go up and down. The chart shows how the historical returns have fluctuated in the past 10 years or, if the fund is less than 10 years old, since its inception. The end points of the columns show the best and worst returns within this period.

## Fund report

### Semi-annual report 2010

#### Return and benchmark

The sub-fund provided a 4.49% return for the first half year 2010. The sub-fund does not have a benchmark, but relative to the general market development for medium-term bonds, the achieved return is satisfactory.

#### Market

Danish bond yields fell to a new historical low. Despite the fact that a number of economic indicators point towards recovery, it was the significant debt problems in a row of European countries that set the agenda in the fixed income market. The high debt burden in more countries caused investors to move into countries with low debt - among others Denmark. Therefore the 10-year government bond yield fell 0.98%.

At the same time, the Danish central bank cut its lending rate twice to the record low level of 1.05%.

#### Performance

Our expectation for slightly increasing yields at the beginning of the year did materialise. The massive focus on the debt problems in Europe had a positive bearing on Danish government bonds, and the sub-fund's holding of government bonds saw solid returns. The sub-fund's portfolio of floating-rate bonds pulled in the opposite direction. These bonds have a built-in insurance against increasing

interest rates, as the coupon rate increases in step with future increasing interest rates. The sub-fund's holding of floating-rate bonds did, however, provide a 1-2% return, which underperformed government bonds but outperformed the money market.

#### Market outlook

We expect moderate economic progress in the second half year, and this will also imply slightly increasing interest rates in Denmark. We take a positive stance on mortgage credit bonds, as they have confirmed their very high credit rating during the financial crisis.

#### Strategy

We will pursue a cautious investment strategy focusing on keeping the portfolio's interest rate sensitivity close to or below that of the market index with which the portfolio's return is compared. We expect to keep the portfolio's large proportion of mortgage credit bonds.
