<p>Risk profile</p>	<p>The value of the portfolio of the Sub-Fund is calculated on the basis of the market value of the individual equities held by the Sub-Fund, which are issued by companies domiciled in rapidly growing, but not yet fully developed national markets. The market value is influenced by the capital market players' expectations concerning the economic development of the issuing companies, which are also affected by political risks of the country of issue and the country's currency exchange rates. Due to the market concentration ratio, the possibilities of diversification in the Sub-Fund's portfolio can be reduced. High</p>

It is also suitable for more experienced investors wishing to attain defined investment objectives. The investor must have experience with volatile products. The investor must be able to accept significant temporary losses, thus the Sub-Fund is suitable for investors who can afford to set aside the capital for at least 8 years.</p> <p>The Sub-Fund is designed for the investment objective of building up capital.
