

Objectives and investment policy

Objectives

The objective of the fund is to generate high absolute return. The fund is accumulating.

Investment policy

The fund mainly invests in long and short positions in bonds and fixed income markets primarily in the Nordic, but also Euroland, UK and US. The fund aims to utilise imbalances in the markets by investing in both traditional government bonds and mortgage bonds as well as financial derivative instruments. The fund aims to protect the investments by hedging the interest rate risk fully or partially, as well as by investing in a number of different strategies. The gross exposure is capped at 150 times the value of net assets. The investment strategy is active. This means that there may be significant differences in the return relative to the alternative investment fund's target. Fund units can normally be redeemed on banking days with one week's notice. Recommendation: This alternative investment fund may not be appropriate for investors who plan to withdraw their money within 3 years.

Latest fund report

In September, Danske Invest Hedge Fixed Income Strategies DKK Sub-Class A provided a return of 1.03%. Year to date the return is 5.74%. Weak sentiment in the European economies and in the US economy, ratecut and a restarting of QE from ECB, expected new cuts from both ECB and the FED in the future, Brexit never ending story, Italian budget and finally the US vs. China trade war. At the moment there are plenty of things to worry about and it has also had some impact on our performance. In September, the fund provided a return of 1.03%. A smaller hike from ECB than the market expected and a pickup in rates in general were contributing to the positive performance, but there were overall large movements in the different strategies. In general, the wide yield fluctuations and extremely low interest rates have contributed to poorer liquidity in many of the markets in which we are active. Moreover, it also appears that the regulation, which is affecting banks on a regular basis, also contributes to reducing the different banks' risk appetite. Going forward, we expect that the above scenario will continue to provide us with attractive opportunities as investors.

At the end of September the portfolio risk level (in terms of Value-at-Risk) is approx. 60% below our maximum risk limit, which is a small reduction in risk compared with a month ago.

Historical returns are no reliable indicator of future returns. It should be noted that monthly returns (in per cent) are non-additive.
