

## Objectives and investment policy

### Objectives

The objective of the fund is to generate high absolute return. The share class is accumulating.

### Investment policy

The fund mainly invests in long and short positions in bonds and fixed income markets primarily in the Nordic, but also Euroland, UK and US. The fund aims to utilise imbalances in the markets by investing in both traditional government bonds and mortgage bonds as well as financial derivative instruments. The fund aims to protect the Investments by hedging the interest rate risk fully or partially, as well as by investing in a number of different strategies. The gross exposure is capped at 150 times the value of net assets. The investment strategy is active. This means that there may be significant differences in the return relative to the alternative investment fund's target. The fund adheres to the Responsible Investment Policy of Danske Bank and restricts certain sectors and companies from its investment universe. Subscription is only possible for investors with a portfolio management agreement with Danske Bank or other distributor as described in the prospectus. Fund shares can normally be redeemed on banking days with one week's notice. Recommendation: This alternative investment fund may not be appropriate for investors who plan to withdraw their money within 3 years.

### Latest fund report

In August, Danske Invest Hedge Fixed Income Strategies, DKK Sub-Class W provided a return of -0.21%. Year to date the return is 1.75%.

We have started the year with positive performance on most of our strategies, but especially the strategies in Danish kroner has contributed negative to performance.

The coronavirus 'COVID-19' spreading from China to the rest of the world was the main topic during the entire year of 2020 - and will likely be the topic again in 2021.

We have worked on simplifying our portfolio, but at the same time, we have seen many interesting trades during the COVID-19 crisis. On the other hand, the ongoing quantitative easing from a number of central banks is now reducing many of the same opportunities. At the same time, we have extremely low interest rates in general, combined with historically narrow spreads on mortgage bonds (and similar bonds), which means it has become more difficult to generate positive returns for a fund like this.

Earlier we have indicated we might end up short of our target return (which is the risk free rate + 3-5%). After a strong start, we now expect to come within our target return for the year.

On the positive side, it also appears that the regulation, which is affecting banks on a regular basis, continues to reduce the different banks' risk appetite. Going forward, we expect this scenario will provide us with attractive opportunities as investors.

At the end of August, the portfolio risk level (in terms of Value-at-Risk) is approx. 28% below our maximum risk limit, which is an increase in risk compared to the beginning of the month.

Historical returns are no reliable indicator of future returns. It should be noted that monthly returns (in per cent) are non-additive.
