Risk and reward profile

The fund is categorized as 3. The indicator illustrates the typical correlation between the risk and your potential return of the investment. The categorization is determined by the fluctuations in the fund's net asset value over the past five years and/or representative data.

Significant historical volatility equals high risk and low volatility equals lower risk. Please note that the fund's categorization is not constant

and the categorization may change over time. Historical performance data is not necessarily a reliable indicator of the future risk profile.

The risk indicator is purely a mathematical calculation and it does not take devaluations, political intervention and sudden fluctuations in interest rates and currencies into account. Risk class 1 is not a risk-free investment.

The principal risks of the fund are interest rate risk, credit risk and market risk. Changes in interest rates will affect the fixed income investments.
